Mobilization against Genetically Modified Organisms in Portugal

Sofia Bento, Lúcia de Oliveira Fernandes, Lays Helena Paes e Silva, and Oriana Rainho Brás

Summary

In Portugal, several organizations and citizens’ movements have been strongly opposing the production and consumption of GMOs since the 1990s. They oppose GMO maize plantations, while also providing information on the subject and boycotting the consumption of GMO foods. They have also organized several public initiatives against the use of herbicides (especially glyphosate) associated with GMO production.

The Portuguese section of the Environmental Justice Atlas (EJAtlas) features a selection of environmental conflicts in Portugal after the democratic revolution of 1974, and anti-GMO mobilization is one of them. The EJAtlas is a map of environmental conflicts in the world, set up and managed by the European Commission project “Environmental Justice Organizations, Liabilities and Trade (EJOLT).” Subsequently, the exploratory project “Portugal: Ambiente em Movimento” (Portugal: Environment on the Move) took this work further and built a website showcasing 60 conflicts in Portugal, including cases concerning non-sustainable agriculture.

According to the World Health Organization, GMOs can be defined as “organisms (i.e., plants, animals, or microorganisms) in which the genetic material (DNA) has been altered in a way that does not occur naturally by mating and/or natural recombination. The technology is often called ‘modern biotechnology’ or ‘gene technology,’ sometimes also ‘recombinant DNA technology’ or ‘genetic engineering.’” The European Union legislated on the issue of genetically modified organisms for the first time in 1990, authorizing the use of 17 organisms, although several member-states prohibited them in their territory.

In 1997, Greenpeace and Quercus, a Portuguese association for nature conservation, temporarily stopped the unloading of a GMO maize shipment in Portugal. The following year, the European Union enacted a de facto moratorium on the approval of new GMOs. In 1999, in Portugal, 12 organizations formed the platform “Transgénicos Fora do Prato” to inform people about and act on the subject. The platform’s name translates as “Transgenics out of Our Plate”; later, when producers of GMOs expanded their sectors of influence and entered the biofuels field, it changed its name to “Transgénicos Fora” (Transgenics Out). In 1997, the national meeting of environmental organizations called for a precautionary approach on GMOs by the Portuguese government, who, later in the year, suspended authorizations to sell GMO seeds. A survey of the Portuguese population in 2000 revealed a general cautious stand towards GMOs, with a fifth of the people who took part in the survey being radically unfavorable to GMOs.
The situation radically changed in 2003, when the European Union passed comprehensive laws on the authorization, use, and surveillance of GMOs. That same year, the Portuguese government approved the cultivation of some GMOs in Portugal. In 2005, it regulated the coexistence of genetically modified varieties with conventional crops and organic production, although environmental associations argued this coexistence was impossible without contamination.

Meanwhile, in 2004, the Association of Algarve Municipalities (AMAL) was the first to declare the intention of being a GMO-free zone. However, only in 2006 did the government allow the legal possibility for farmers or municipalities to declare a GMO-free zone. Quercus and the municipal assembly of Aljezur (Algarve) criticized the government for demanding nearly impossible requirements and ensuring no guarantees to farmers in the process of creating GMO-free zones.
In 2007, the production of 50 hectares of GMO corn in Silves, Algarve, was made public and AMAL and the Almargem-Association for Defense of Cultural and Environmental Heritage of the Algarve positioned themselves against it. In August 2007, about 150 people organized the movement “Verde Eufémia,” and destroyed 1 hectare of the corn in protest against GMO crops. The authorities considered it an act of vandalism and a court issued proceedings against some of the participants.

During the 2010s, the movement against GMOs has been raising related issues, like the dangers of patenting life forms and creating monopolies on seeds, the consequent threats to food sovereignty, and also the use of chemicals closely associated with GM crops. Recently, the use of herbicides in growing GMO crops became more visible due to the claim by the International Agency for Research on Cancer (IARC) that glyphosate is “probably carcinogenic to humans.” In August 2015, the chairperson of the Portuguese Medical Association wrote about the evidence of glyphosate’s harmful effects on health, appealing to physicians and to the responsibility of the government and the health directorate to take precautionary action by suspending the use of that substance (Silva 2015). Although more than 1,600 tonnes of glyphosate are sold in Portugal daily, the Ministry of Agriculture claimed it is unnecessary to test it in a routine analysis.

In 2016, the platform “Transgénicos Fora” collaborated with the Detox Project, assessing the presence of glyphosate in the urine samples of 26 volunteers and some food samples. The study revealed strikingly high levels of glyphosate in the urine, both compared to the maximum levels legally allowed and to other studies conducted in Europe. A TV documentary on glyphosate released in 2016 brought great visibility to this study’s results and to the issue of glyphosate in Portugal.

By 2016, 28 municipalities and 3 regions (Algarve, Azores, and Madeira archipelagos) had declared themselves to be GMO-free zones.

Opposition to GMOs in Portugal has been very active since the 1990s, bringing together environmental associations, farmers’ organizations (practitioners of conventional and organic modes of production), and individual citizens. The movement has consistently pointed to the complex implications of GMOs for ecosystems, human health, social justice, democratic sovereignty, and economies. However, a more encompassing public debate on GMOs has rarely occurred in Portugal. Even so, the matter continuously re-enters the public debate through different doors: it was so with the glyphosate issue and it is so with the negotiations of the Comprehensive Economic and Trade Agreement (CETA) and the Transatlantic Trade and Investment Partnership (TTIP). It remains an open issue.

About the authors:

Sofia Bento
Sofia Bento is Sociology Professor at the University of Lisbon, and researcher at SOCIUS-Research Centre in Economic and Organizational Sociology, CSG Consortium of Social Sciences and Management, ISEG School of Economics and Management. She holds a PhD in Sociology of Innovation by the École Normale Supérieure des Mines de Paris, and in Sociology of Economics and Organizations by ISEG School of Economics and Management, University of Lisbon. Her research focuses on studies of science and technology especially topics related to the environment, water resources, climate change, citizens’ involvement and participative processes. She has coordinated European projects under the frame of ERA CIRCLE the European research program dedicated to climate change in mediterranean countries. Recent projects focus the transition movement in Portugal and the construction of technical-scientific knowledge in the Portuguese Environment Agency. She trained in participative methodologies and has applied in different research contexts. [https://orcid.org/0000-0002-2267-7376](https://orcid.org/0000-0002-2267-7376)

Lúcia de Oliveira Fernandes
Lúcia Fernandes is recipient of a postdoctoral fellowship (SFRH/BPD/79933/2011) supported by Ministry of Science, Technology and Higher Education (Portugal). Lúcia de Oliveira Fernandes holds a PhD in Sociology from the University of Coimbra, Portugal. She concluded a Master of Social Sciences, specialized in Environmental Policies, at the University of Aveiro, Portugal, and holds a degree in Chemical Engineering from the Federal University of Rio de Janeiro, Brazil. She has conducted research and published in interdisciplinary journals. She currently works in a post-doc joint project between SOCIUS-Research Centre in Economic and Organizational Sociology, University of Lisbon, and CES-Center for Social Sciences, University of Coimbra. The project addresses environment, health and citizens mobilization in Transition experiences in Portugal and other sustainability experiences. Other research topics relate to environmental conflicts in Portugal. She co-coordinated the project EJ atlas Portugal, and co-coordinates the project PacM-Portugal: Environment on the move.

Lays Helena Paes e Silva
Lays Helena Paes e Silva is a PhD in Social Sciences by CES-Centre for Social Studies, University of Coimbra, Portugal, and a Master in Law by the Law School of University of Coimbra. She holds a degree in History by Universidade Federal de Uberlândia, Brazil, and a degree in Law by Centro Universitário do Triângulo, Brazil. She currently teaches at Faculdade das Américas, FAM, Brazil. Her research interests are linked to natural environment and society, especially regarding the environmental justice paradigm. She participated in the Ecology and Society Workshop at CES until December 2015, and is a team member of the project EJ Atlas Portugal, and PacM-Portugal: Environment on the Move.

Oriana Rainho Brás
Oriana Rainho Brás concluded a PhD in Sociology at CES-Centre for Social Studies/Economics Faculty, University of Coimbra, in 2013. She holds a degree in Social and Cultural Anthropology by the same university. Her research focuses on social studies of science, health, socio-environmental conflicts and public participation in water management. She is a consultant of the project PacM-Portugal: Environment on the move. She currently works in the project RePortCancer: Researching the dynamics and international positioning of the Portuguese medical oncology
community promoted by ASPIC-Portuguese Association for Cancer Research. She is a researcher at the University of Lisbon, SOCIUS-Research Centre in Economic and Organizational Sociology, CSG Consortium of Social Sciences and Management, ISEG School of Economics and Management.
