J. M. Rugendas’ Contribution to an Iconography of the Animal Condition in Nineteenth-Century Brazilian Society

Ana Lucia Camphora

Summary
The first four centuries of Brazilian history witnessed a wide range of interactions between humans and nonhuman animals that were an essential component in the formation of Brazilian society. Selected narratives from primary and secondary sources describe this complex network of interactions, in which humans and nonhumans were both partners and adversaries, within a context of wide-ranging cultural and environmental exploitation. The artwork of Johann Moritz Rugendas (1802–1858), a German artist who graduated from the Munich Academy, reveals some of the nuances of these hybrid scenarios, providing invaluable insights that may deepen our understanding of the period and of those who were given no voice and remained on the periphery of historical events.

A significant weakness of commonplace records of the first four centuries of Brazil’s history is that they do not capture the wide range of interactions between humans and nonhuman animals, nor recognize them as an essential element in the formation of Brazilian society. Despite this limited formal recognition, selected narratives regarding the period that spans from the dawn of the sixteenth through the end of the nineteenth century provide valuable insights and raise new questions regarding such interactions.
An analysis of fragments from approximately 130 writings, such as diaries, letters, and other primary and secondary sources, reveals that nonhuman animals were intensively involved in events and were described and used in a myriad of often contradictory ways. Animals appear as things, as food, occasionally as beings capable of expressing feelings and human-like behavior, as sources of spiritual power for native groups, as medicine available for all those living in the tropical environment, as cargo and transportation, and as elements in play, sport, and domestic leisure. They also served as symbols and metaphors for Brazilian society itself, alluding to a wild New World to be conquered, and were seen as assets of the Portuguese Crown as well as threats to both human survival and settlers’ property. For priests, the actions of certain animals or even their mere presence could be taken as an expression of the devil’s force or the power of God. Paying attention to these meanings and functions can shed light on the still obscure role of nonhuman animals during this chapter of Brazilian history.
Since history is essentially built from the arguments of those who bear language, historical fact is constituted as a narrative that is communicated and thus kept alive in collective memory. Yet iconography provides insight that can deepen our understanding of those who were given no voice and thus remain on the periphery of the historical record. The artist’s eye, which is usually attracted to the strange and the unexpected, has the potential to reveal channels of recognition for those things that words cannot explain or that seem unusual in daily life.

Following the opening of Brazilian ports to international trade in 1808, many European artists traveled to Brazil, taking up the challenging mission of drawing and conveying the New World to Europe. Johann Moritz Rugendas, a German artist who graduated from the Munich Academy, arrived for his first stay in Brazil in 1821. He remained in the country for two years, visiting a number of different regions. In his drawings, later converted into lithographs, Portuguese South America was depicted from a refined and detailed standpoint.
There is a peculiar proximity between a dead parrot, the first symbol that represented the new territory, and horses, which were highly associated with the values and the power of the Portuguese Crown. Detail from Johann Moritz Rugendas, *Rencontre d’Indiens avec des voyageurs européens*. c. 1821–1825.

Rugendas was also able to perceive the place of animals in a dense network of interactions, identifying some of the most representative bonds that had already come into being in the early sixteenth century. In his book *Voyage pittoresque dans le Brésil*, published in 1835, some of his pictures suggested a synthesis of these hybrid associations in the everyday scenario of the ongoing meetings formed and performed by native people, European explorers, enslaved Africans, and animals such as parrots, jaguars, horses, and cattle, to mention just a few.
An intricate scene of domination and brutality involving settlers, horses, mules, and slaves. Usually, human and nonhuman workers were used for the same work of transporting cargo or people. Detail from Johann Moritz Rugendas, *Porto do Estrela*. c. 1821–1825.

Both native fauna and domesticated species from Europe were represented in impressive detail, suggesting that they could be recognized as more than goods, and perhaps as actors. In his writings, Rugendas revealed his concern for the conditions of animals in diverse circumstances, demonstrating an accurate perception of the adaptation of European domestic species to the tropical environment, as well as the subtle nuances of the behavior of innumerable wild species. As he also noted, the main characters of Brazilian society were its quadrupeds and this recognition was genuinely demonstrated in his collection of drawings. Cattle moving across extensive territory, riders sitting astride their horses, “troops of mules” crossing rivers, military cavalry occupying the streets of colonial cities, slaves and oxen working together in sugar mills undoubtedly associated with the very meaning of colonization.
All kinds of wild species—except poisonous ones—were considered to be food by the native peoples and this habit was steadily adopted by the settlers as well. Detail from Johann Moritz Rugendas, *Famille indienne*, c. 1821–1825.

Hunting activities improved initial cooperation between the first European explorers and the native people, the latter described by Rugendas as highly skilled hunters. He depicted them cooking a monkey and killing a jaguar, both types of animals bearing strong symbolic reference to native cosmology. In *Meeting of the Indians and European Explorers*, a remarkable contrast in hunting approaches is suggested. The indigenous people, naked and armed with arrows, were able to move quickly and silently toward their prey, while Europeans with their horses and noisy shotguns were almost sure to scare the wild game away. It is worth noting that the opening of the ports gave a further boost to hunting, meant to supply the several European scientific missions that were spread out across Brazilian territory.

In light of the paucity of existing records on this subject within Brazilian environmental history, research on the probable convergence of iconographic records and discursive narratives may provide valuable material to the field of human-animal studies. The variegated testimony of human-animal partnership in Rugendas’s artwork may be best appreciated through an integrated perspective that examines the relevant social, economic, and environmental factors that are able to afford us a greater understanding of these relationships.

About the author:

Ana Lucia Camphora

Ana Lucia Camphora is a lecturer in the field of human-animal studies at Faculdade Hélio Alonso in Rio de Janeiro. She is the author of *Animais e sociedade no Brasil dos séculos XVI a XIX* [Animals and Society in Brazil from the Sixteenth to the Nineteenth Century], a book presenting a historical background of the complex interactions, values, and uses that disclose nonhuman animals as having played a key role in the formation of Brazilian society. The first edition, printed in Portuguese, was supported by the Brazilian Academy of Veterinary Medicine, the National Council of Beef Cattle, the National Society of Agriculture, and the State of São Paulo Federation of Agribusiness.
