This visually immersive work of graphic nonfiction dives into a world where ants, cicadas, bees, and butterflies visit a library exhibition that displays their stories and humanity's connection to them throughout the ages. *Insectopolis* is a visual feast layering history and science, color and design, to tell the remarkable tales of dung beetles navigating by the stars, hawk-size prehistoric dragonflies hunting prey, and mosquitoes changing the course of human history.

Kuper also illuminates pioneering naturalists, from well-known figures like E. O. Wilson and Rachel Carson to unheralded luminaries like Charles Henry Turner, the Black American scholar who documented arthropod intelligence, and Maria Sibylla Merian, the seventeenth-century German regarded as the mother of entomology.

Galvanized by the sixth extinction and the ongoing insect crisis, Kuper takes readers on an unforgettable journey.
