

Miyaoi Yasuo's Perspective on Life in Nineteenth-Century Japan: Intersecting Humans and Animals, Shared Emotions and Ethics

Tomoya Masuda

Summary

This paper explores *Kidan zasshi* (1858), a collection of strange tales by Miyaoi Yasuo, a rural intellectual from Edo-period Japan. Miyaoi's work challenges the Confucian moral hierarchy that placed humans above animals by portraying humans and animals as interconnected through reincarnation, shared ethics, and emotions. While urban intellectuals often emphasized human superiority, Miyaoi's narratives—rooted in rural experience and didactic storytelling—present animals as sentient moral agents. Blending moral lessons with folklore, *Kidan zasshi* contains 160 tales that feature animals assisting, harming, or avenging humans. Rather than a primitive belief system, the text reveals an alternative ethical framework for human–animal relations that coexisted with emerging modern rationalism.

Kidan zasshi (奇談雜史, A Collection of Strange Tales), written in 1858 by Miyaoi Yasuo (宮負定雄, 1797–1858), challenges the Confucian moral hierarchy that places humans above animals. In nineteenth-century Japan, urban intellectuals often adhered to a Confucian view of animals that portrayed them as morally and intellectually inferior to humans (Bandō 2023). This paper highlights how farmers in the same period, who typically maintained a close bond with animals through their daily lives and folk beliefs, embraced a worldview that contrasted with the dualistic perspective held by intellectuals.

Miyaoi was a rural intellectual from Matsuzawa Village in the Katori District, Shimousa Province (present-day Asahi City, Chiba Prefecture)—a long-established agricultural community appearing in records as early as the twelfth century. Born into a farming household, Miyaoi served as village headman and participated in local governance. He described the village as “remote” and portrayed himself as a farmer who had worked in the fields since childhood, often covered in dirt (Miyaoi 1932: 295). Yet he also took pride in practical learning related to agricultural administration and engaged in publishing activities. From this standpoint, he criticized literary and poetic pursuits as not constituting genuine learning (Miyaoi 1932: 286). His self-identification as a farmer was not merely a simple occupational label but rather a stance opposing urban literary intellectuals.

Miyaoi’s *Kidan zasshi* is a compilation of 160 strange tales gathered from various sources, including accounts of

animals that either assist or harm humans, as well as stories of humans transforming into animals and vice versa. Miyaoi regarded the stories as historical truths rather than allegories, through which he aimed to instill moral values in people who lacked formal education. In the preface, Miyaoi states that “from 1853 I gathered and edited strange tales that I had long enjoyed hearing,” and explains that the purpose of *Kidan zasshi* was “simply to record facts in order to admonish the young” (Miyaoi 2010: 19). Miyaoi sometimes emphasizes the realism of his stories by presenting them as experiences of his contemporaries, for example, specifying details such as “November 1854, Mariko post station on the Tōkaidō, the farmer Kyūsuke” (Miyaoi 2010: 253).

Miyaoi believed that all living organisms have male and female counterparts, and that seeds harvested from female plants would produce better yields. For this reason, this illustration depicts how to distinguish between male and female crops. From *Sōmoku senshyū roku* (草木撰種録).

Kidan zasshi contains multiple accounts of humans reincarnating as animals or plants. For instance, there are stories depicting individuals consumed by obsession during their lifetimes who are reborn as snakes after death to seek revenge. Similarly, those who die without repaying debts are reborn as oxen or horses to work off their obligations. For farmers, oxen and horses were indispensable labor resources in daily life, leading to their conceptualization as reincarnation forms for humans repaying debts or fulfilling obligations. In this way, Miyaoi and his contemporaries believed that a person’s actions in life determined the type of animal they would be

reborn as. Stories of people becoming oxen in order to repay debts also appear in *Nihon ryōiki*, the oldest Japanese Buddhist tale collection. This suggests that Miyaoi's worldview was not exceptional but part of a long-lived narrative tradition shared across social strata.

Rice Cultivation through the Four Seasons This is a folding screen depicting a rural village in the Edo period. The farmers lived alongside animals such as oxen, horses, and dogs.

In the text, animals are also depicted transforming into humans. Animals subjected to harm or kindness by humans change their forms to repay those actions. This concept is not limited to foxes and raccoon dogs, traditionally believed to shapeshift, but extends to turtles, birds, and fish, who transform into humans to confront them directly and communicate through language. One story recounts an incident involving an ambitious physician who created medicines using animal-derived ingredients and intended to publish his findings in books. In retaliation, a coalition of birds, beasts, insects, and fish conspired against the physician, successfully thwarting the publication of his work. The tale ends with a reflection on the sinfulness of taking

lives. Although the aversion to killing aligns with Buddhist values, Miyaoi’s perspective goes further, viewing animals as sentient beings sharing emotions and ethical principles.

His tales include accounts of loyal dogs, cats, and monkeys that take on their masters’ illnesses or avenge their masters’ enemies. According to Miyaoi, such animals were honored with funerals comparable to those of humans, with graves or burial mounds that still existed during his time. Animals are also portrayed as equals capable of appropriate retaliation against malice. Even creatures typically regarded as weak, such as aphids or eels, are depicted as being able to seek revenge against humans.

Miyaoi Yasuo’s outlook on life, shaped by his experience of spending his time in a rural village, reflects his perspective as a farmer who resists seeing humans and animals in a binary framework. Furthermore, humans and

animals were also thought to share ethics and emotions, with consistent behavior in response to virtuous or immoral actions. The late Edo period is often portrayed as a move toward modern rationalism. Yet *Kidan zasshi* does not treat animals and humans as opposing beings but finds emotional commonality between them and allows for the possibility of mutual rebirth. Rather than a primitive belief system, such ideas reveal an alternative ethical framework for human–animal relations that coexisted with emerging modern rationalism. Miyaoi’s work therefore invites us to reconsider not only Edo-period moral thought but also modern assumptions about the human–animal divide.

About the author:**Tomoya Masuda**

A graduate of Tohoku University, Tomoya Masuda is a postdoctoral research fellow at the Japan Society for the Promotion of Science. His research focuses on the intellectual history of Japan from the eighteenth to the nineteenth century, with a particular emphasis on Kokugaku scholars such as Motoori Norinaga. His aim is to illuminate how these Kokugaku scholars conceptualized and created images of “Japanese identity” and “Japanese sentiment” in connection with the emperor and mythology.
