"If John Muir Had Been an Agrarian: American Environmental History West and South"

Stewart, Mart A.

Stewart, Mart A. "If John Muir Had Been an Agrarian: American Environmental History West and South." *Environment and History* 11, no. 2 (May, 2005): 139–62. doi:10.3197/096734005774434575 . Environmental history in and of the American South has developed in a different direction than the field in general in the United States, which has been shaped by its origins in the history of the American West. The history of humans and the environment in the South has been much more driven by the history of agriculture than by frontier or wilderness interactions, as well as by the history of the relationship between white and black Americans and their respective uses of the land in the region. It also has more in common with environmental history outside the United States than with the field as it at first developed in the United States. All rights reserved. © 2005 The White Horse Press
