

Only One Earth: Stockholm and the Beginning of Modern Environmental Diplomacy

Andreas Grieger

Summary

The 1972 United Nations Conference on the Human Environment in Stockholm was the first UN conference focused solely on the global environment, marking the beginning of international environmental politics. Delegates codified twenty-six principles for the environment and development. One of the conference's most important achievements was the articulation of the UN Environmental Program (UNEP), which would be established in Nairobi, Kenya in the same year.

Large-scale industrial pollution, the growing threat of nuclear radiation, documented mass destruction of entire ecosystems around the globe: the 1960s witnessed the advent of widespread international concern about a global environmental crisis. As this heightened global awareness triggered a modern environmental movement, it was the initiative of a small country in Scandinavia that laid the foundation for international cooperation on environmental matters.

On 13 December 1967, a proposal reached the United Nations General Assembly to organize a conference in order to “facilitate co-ordination and to focus the interest of member countries on the extremely complex problems related to the human environment.” It was the Swedish delegation, led by Sweden’s UN Representatives Sverker Åstrom and Borje Billner, who took the initiative to convene the first United Nations Conference on the Human Environment (UNCHE) in its capital city of Stockholm in 1972. By the late 1960s, Sweden had established itself as a respected middle power, oftentimes challenging the Superpowers and their Cold War status quo. Instead, Swedish diplomats tried to use the UN system to shift the diplomatic focus away from a nuclear paradigm towards more concern for international development and environmental protection.

Two years after their initial proposal, on 15 December 1969, UN Resolution 2581(XXEV) affirmed that:

It should be the main purpose of the Conference to serve as a practical means to encourage, and to provide guidelines for, action by Governments and international organizations designed to protect and improve the human environment and to remedy and prevent its impairment, by means of international cooperation, bearing in mind the particular importance of enabling the developing countries to forestall the occurrence of such problems.

—Resolution 2581(XXEV), UN General Assembly, 15 December 1969

As soon as the “Swedish matter,” as the preparation for the conference became known among UN officials, was formerly accepted, the Swedish delegation led the preparatory process to bring attention to environmental problems to the highest level of international diplomacy.

On 5 June 1972, the UN Conference on the Human Environment opened its first plenary session at the Folkets Hus in Stockholm. As host, Swedish Prime Minister Olof Palme restated that his government attached the greatest importance to the success of the conference. His speech also openly criticized the industrialized world for its ecological and economic exploitation, causing the world's greatest environmental problems at the expense of developing countries. While his critique was emblematic for the general tensions between developed and developing countries, which continued throughout the conference, the 114 governments represented in Stockholm reached an unprecedented level of agreement. Not least due to the diplomatic skills of the conference's Secretary-General Maurice Strong, UNCHE not only established a remarkable Declaration of Principles, but also came up with the necessary institutional arrangements for international cooperation in environmental protection. The most important outcome being the creation of the [United Nations Environment Programme \(UNEP\)](#).

Mrs. Indira Gandhi, Prime Minister of India, addressing the conference. Together with other leaders of the developing world, Gandhi singled out poverty as the main cause for environmental degradation and demanded greater responsibility and development aid from the industrialised countries.

What further set the Stockholm summit apart from former UN conferences was the amount of popular interest and civil participation. Sweden's quest for an open and inviting conference setting, which broke with traditionally rigid UN formats, opened the way for civil actors to raise their own concerns about the environment. Accordingly, the number of activists and nongovernmental organizations (NGOs) that attended the events in and around the conference was unprecedented. Through the Environment Forum, as well as through demonstrations and petitions, activists and NGOs opened up the dialogue about the various environmental and development issues and tried to influence the conference delegates. This would set the precedent for most big UN conferences and culminated in the thousands of NGO activists that would gather at the [1992 Earth Summit in Rio de Janeiro](#) .

The UN Conference on the Human Environment marked a watershed in the evolution of humanity's relationship with the earth and global concern about the environment. While most of the conference's accomplishments were mainly rhetorical, its ultimate success was that environmental policy became a universal concern within international diplomacy, and the conference's motto of "Only one Earth" became iconic for the modern environmental movement.
