

Foundation of the Oekonomische Gesellschaft Bern

Martin Stuber

Summary

The Oekonomische Gesellschaft Bern (Economic Society of Bern) was established in 1759 during a time of critical shortages. The previous harvest had been marked by crop failure, and the Seven Years' War was raging across Europe. The Bern society presented itself as an answer to increasing international competition. It aimed to emulate institutions for promoting agriculture, commerce and trade which had already been established in many places in Europe, such as those in Dublin, Edinburgh, Florence, Göttingen, Copenhagen, London, Rennes, and Stockholm. As part of this trans-European Economic Enlightenment movement, the Oekonomische Gesellschaft combined a utilitarian approach to science and nature with goals for economic, societal, and political reform. Its primary goal was optimizing the use of natural resources by means of science, an undertaking which, the founders believed, would secure the freedom and independence of the city-state Bern.

Agriculture was the primary focus of the Oekonomische Gesellschaft's initial program in 1759, although it was not the only concern. Wetlands were to be drained, rivers were to be made more easily navigable and the riverbeds reinforced, and the earth was to be investigated for useful materials such as fertilizers, fuel, and metals. The organization aimed to promote manufacturing and reduce energy consumption. The overall goal was to create an industrious, prosperous, and contented population. This broad approach had its basis in the traditional European household economy, but at the same time went considerably beyond it. The static perspective of the "Hausväter" was replaced by a dynamic, growth-oriented model, and the scope was extended from the individual household to the entire territory.

J.J. Sprüngli's observations on arrival or first singing of the birds from 1766-1785

Sprüngli, Johannes J. *Daily meteorological observations 1766-1785*, Burgerbibliothek Bern.

The Oekonomische Gesellschaft was dominated by educated magistrates, with nearly two-thirds of the 126 official members in 1800 being Bern patricians, who could thus act both as scientific and technical experts, as well as political reformers. A second important group consisted of clergymen, who were the most active participants among the 228 members of the branches of the society distributed throughout the entire territory. Honorary members, 192 in all, from Switzerland, Germany, France, Great Britain, Italy, and Russia formed a third group and provided international exchange of ideas as well as securing the Bern society's international reputation.

The far-reaching goals were put into action at various levels. The initial starting point was a surveying project. The Oekonomische Gesellschaft organized an ongoing and standardized meteorological measurement system, produced a comprehensive inventory of botanical resources, and wrote “Topographical and Historical Descriptions” of the region’s potential for development.

Secondly, the Bern society was part of a continuous international dialogue: it maintained a network of correspondence, exchanging practical experiences and scientific literature as well as textile samples and cultivated plant varieties.

The *Abhandlungen und Beobachtungen* ("Essays and Observations") of the Oekonomische Gesellschaft were published simultaneously in German and French, which was crucial for strengthening the international connections of the Oekonomische Gesellschaft.

Thirdly, the Oekonomische Gesellschaft sought public awareness and involvement: it advertised essay contests with prizes, offered rewards for innovative practical accomplishments, and published an internationally respected journal, *Abhandlungen und Beobachtungen* ("Essays and Observations"). Finally, it worked to implement its reform proposals both in society and government administration.

As was the case for the Economic Enlightenment in many places, there was a discrepancy between the ambitious goals of the Oekonomische Gesellschaft and the limited implementation of them in reality. However, economic-patriotic societies cannot be measured simply on the basis of their immediate practical effects. A longue durée perspective is more useful. The efforts to modernize the (agricultural) economy and the (agricultural) landscape, as well as institutional, experimental, discursive, and media aspects of the Economic Enlightenment continue well into the nineteenth century, when they first truly begin to develop. This can be seen particularly clearly in the example of the Oekonomische Gesellschaft Bern, which transformed itself from an elite reform society in the

eighteenth century into an agricultural association with a wide social base in the nineteenth century, and thereby continued to play an important and more-or-less uninterrupted role in the active development of a more scientifically based use of nature.
