Multimedia Library Collection: Environmental Film Profiles (videos)

A Place Without People

Apostolidis, Andreas. *A Place Without People*. Athens: Anemon Productions, 2009. HDV, 55 min. https://youtu.be/QrEmUjNhwyo.

> *A Place Without People* is a film about how the local population of Tanzania has been evicted to make way for the creation of the world's most famous nature reserves. Set in the famous Serengeti and the Ngorongoro crater, the film explores how the parks came to be and how western perceptions about nature radically altered both the East African landscape and society. The film focuses on the people who "should not be there," not only because their voices are rarely heard but also because they are constantly being antagonized and excluded, while the tourist industry is rapidly depleting the area's natural resources.
