"Radiation Protection and Moral Theory"

Sumner, David, and Peter Gilmour

Sumner, David, and Peter Gilmour. "Radiation Protection and Moral Theory." *Environmental Values* 4, no. 3 (1995): 241–55. doi:10.3197/096327195776679484 .

It seems likely that there is no threshold for the induction of cancer by ionising radiation. Hence even small radiation doses may result in a finite number of premature deaths if a large number of people are exposed. Various arguments are used to demonstrate that such deaths, if they occur, are acceptable; these arguments are shown to be flawed. Many of the arguments, and the ICRP's principle of justification, appear rooted in a utilitarian system of moral philosophy. Such a system is superficially attractive as it appears objective and rational; however, the objectivity may be an illusion masking the underlying aims of the interested parties.
