

Multimedia Library Collection: Environmental TED Talks (videos)

Slat, Boyan, "How the Oceans Can Clean Themselves"

Slat, Boyan. "How the Oceans Can Clean Themselves." Filmed October 2012 at TEDxDelft. TEDx Talks video, 11:21. Posted October 2012. <https://youtu.be/ROW9F-c0kIQ>.

Eighteen-year-old Boyan Slat combines environmentalism, entrepreneurship and technology to tackle global issues of sustainability. After diving in Greece, and coming across more plastic bags than fish, he wondered; "why can't we clean this up?" While still being on secondary school, he then decided to dedicate half a year of research to understand plastic pollution and the problems associated with cleaning it up. This ultimately led to his passive clean-up concept, which he presented at TEDxDelft 2012. Working to prove the feasibility of his concept, Boyan Slat currently gives lead to a team of approximately 50 people, and temporarily quit his Aerospace Engineering study to completely focus his efforts on The Ocean Cleanup. In the spirit of ideas worth spreading, TEDx is a program of local, self-organized events that bring people together to share a TED-like experience. At a TEDx event, TED Talks video and live speakers combine to spark deep discussion and connection in a small group. These local, self-organized events are branded TEDx, where x = independently organized TED event. The TED Conference provides general guidance for the TEDx program, but individual TEDx events are self-organized.
