Walchensee Hydroelectric Power Station

Gärtner, Dennis

The Walchensee Hydroelectric Power Station was built between 1918 and 1924 under the supervision of Oskar von Miller, a Bavarian engineer and founder of the Deutsches Museum. At the time, the hydroelectric station was one of the largest in the world, providing power to households throughout Bavaria. Von Miller had discovered how to transport power over great distances using overhead power lines. However, these power lines were not aesthetically pleasing, and if people had demonstrated against their installation in a way similar to today's protests against the widespread "interference" of wind turbines on the landscape, Bavaria would have remained an agrarian state.

Artist’s comment:

I had only heard the term “Anthropocene” briefly prior to working on this comic and had no idea what it could mean. And yet the term describes the era in which we are currently living, an era heavily influenced and being influenced by humankind. Now, more than ever, we all have the ability and the responsibility to shape the future.
