Warmzeit [Warming Period]

Karger, Knut. *Warmzeit*. Munich: Lüthje Schneider Hörl Film GbR, 2012. 16 mm, 80 min. <http://homemade-rocket.com/warmzeit>.

Warmzeit (i.e., warming period) connects people in different places of this world whose everyday lives are affected by global warming. From Greenland to Namibia it portrays individuals experiencing the impact of climatic change, as well as scientists and engineers of alternative energy technologies. In Africa, a mere two degrees of warming are going to destroy the foundation of people's lives. In Greenland today, farmers can grow vegetables in areas where the ground was permanently frozen just decades ago. Major contributors to global climate warming are the industrialized, Western countries and the CO₂ emissions they produce. Human actions have become a decisive global parameter and are going to change the face of the world, if we don't reconsider our choices. (Source: [Official Film Website](#))
