Castiñeira, Delia and Christoph Corves. *Das grüne Gold der Inkas* [Big Spuds, Little Spuds]. Kiel: DokuFaktur Medienproduktion/Corves & Castineria GbR, 1998. BetaCam SP, 52 min.

Big Spuds, Little Spuds examines the impact of climate change and monoculture on one of the world's staple food crops. It takes a close look at the potato to examine the effects of climate change and monoculture on one of the world's staple food crops. With half the planet's population dependent on rice, wheat, potatoes, and corn, to what extent are pests and disease—often exacerbated by climate change—threatening world food security? [...] The film looks at traditional methods of potato farming where Andean families grow their own varieties, practice crop rotation, and utilize a minimum of inputs. In sharp contrast is the industrial method of production used in Idaho, and increasingly in Peru, where just a few high-yielding varieties are grown, where soil fertility decreases, pesticides lose their effectiveness, and *campesinos* wind up working as laborers on their own land. But there is a new pride in the old varieties of potatoes. People are documenting the characteristics of different varieties in an attempt to preserve genetic diversity, and with it perhaps world food security.
