Wolfe, Cary and Maria Whiteman

Wolfe, Cary, and Maria Whiteman. “Landscape and Inscription.” *Environmental Humanities* 8, no. 1 (2016): 143–48. doi:10.1215/22011919-3527758.

This essay discusses the changing notions of landscape and nature at work in the video installation *Mountain Pine Beetle* and explores some of the forces that eventuated in the devastated landscapes of the Rocky Mountain West brought on by the infestation of the mountain pine beetle beginning in the early 2000s—an infestation caused, in no small part, by what some scientists have called a perfect storm of circumstances created by global warming. For this project, the landscape becomes a site of inscription of forces that operate both above and below human scales of perception and interaction with the landscape—forces that are at once geological, economic, and geopolitical.
