See the virtual exhibition The Life of Waste by Simone Müller.

Environmental justice is both a social movement with global reach and an interdisciplinary academic field that addresses the inequalities embedded in the ongoing ecological crisis. The term first originated in the late 1970s and early 1980s in the United States as a sociopolitical response to environmental racism: that is the systemic racism and biased structural organization of society that disproportionately exposes people of color to pollutions, toxic chemicals, and other environmental burdens. Environmental justice denounces the fact that, far from an equalizing process, the ecological crisis exacerbates existing inequalities and dominations. At its core lies the documented observations that people around the world do not equally contribute to the environmental degradations of the Earth, nor do they equally endure their negative consequences. While poor people, women,

indigenous communities, colonized and formerly colonized, people of color, particularly in the Global South, contribute very little to global warming and other environmental destructions, they are often the most exposed and vulnerable to their dire consequences. Environmental justice then stands as a call not only for the respect of our Earth, its various ecosystems, flora and fauna, but also for the implementation of worldwide conditions of justice, equality and dignity for the people excessively impacted.

As a complement to this growing resource page, the Rachel Carson Center for Environment and Society plans a series of commentaries to be published by its blog *Seeing the Woods* .

Contributing editors: Rachel Carson Center alumna fellows Malcom Ferdinand and Robert Gioielli, and RCC editor Kristy Henderson
