## “A Political Ecology of Desire: Between Extinction, Anxiety, and Flourishing”

Margulies, Jared

Margulies, Jared. “A Political Ecology of Desire: Between Extinction, Anxiety, and Flourishing.” *Environmental Humanities* 14, no. 2 (2022): 241–264. doi:10.1215/22011919-9712357

How does attention to exertion and absence of care illuminate possibilities for avoiding extinction amid global biodiversity declines? This article brings together feminist technoscience and more-than-human theory on care with Lacanian psychoanalytic theories of anxiety and desire. It does so to diagnose the threat of extinction anxieties and consider their material and political consequences for impedances to caring for nonhuman life and their flourishing. The article is developed through the empirical case of *Arrojadoa marylandae*, an endangered species of cactus in Bahia, Brazil, as a political ecology of desire. In bringing psychoanalytic thought into conversation with care, it considers how desire sits at the heart of more-than-human care and yet may be thwarted by anxiety. Contending with his own extinction anxieties as they became focused through an endangered cactus on a mountain destined for mining, the author excavates routes toward flourishing geographies: geographies of care-full interspecies alliances composed against Anthropocenic thinking. In concluding, the author urges for greater attention to the work of desire in studies of environmental change and the wider environmental humanities. (Abstract)
