Lekan, Thomas M. “An Otherworldly Species: Joshua Trees and the Conservation-Climate Dilemma.” *Springs: The Rachel Carson Center Review*, no. 1 (July 2022).

About 210 km east of Los Angeles, along the boundary of the Mojave and Colorado Deserts, stands a national park dedicated to the American Southwest’s most threatened botanical icon: the Joshua tree. With their shaggy bark, clusters of spiked leaves, and gnarled limbs reaching over 30 feet high, these trees (actually, they are succulents related to yuccas: *Yucca brevifolia*) reminded

nineteenth-century Mormons of the biblical prophet Joshua with his arms stretched out in supplication—a gesture that befits these whimsical-looking and imperiled plants. (From the article)

This article was originally published in *Springs: The Rachel Carson Center Review*. The journal is an online publication featuring peer-reviewed articles, creative nonfiction, and artistic contributions that showcase the work of the Rachel Carson Center and its community across the world.
