Dargavel, John. *Anthropocene Days*. Winwick: The White Horse Press, 2023.

Anthropocene Days gathers 27 easy-to-read short essays about the environment and climate change in everyday life. While the world and governments are beset by the great woes of changing climate, deforestation, species extinction, air pollution, fouling oceans and so on, we go about individually and locally as best we can from day to day. *Anthropocene Days* contends that these two domains, so apparently separate, are essentially connected.

The book looks at the diverse and mundane activities of daily life to show how the environment is experienced, and does this very personally by drawing its observations from the author's life. It is part memoir, part recent history—a medley of short essays with themes of landscape change, forests, trees, war, fire, pestilence and the domestic life of housing, dusting and clutter. Motivated by present concerns, some reach back to the 1940s. They are set in Australia, Britain, India, Singapore and America. (Source: The White Horse Press)
